

Transatlantic Re ®

Transatlantic Re ® is a publicly traded reinsurance organization, headquartered in New York with 24 offices worldwide. We have built a strong reputation and a track record of customer service excellence since 1978 and we are one of the most competitive firms in our industry.

The following are our Core Values which are woven into our key employment policies and procedures:

Integrity	Work honestly. Enhance our reputation
People	Develop diverse talent. Reward excellence
Customer Focus	Anticipate their priorities. Exceed their expectations.
Respect	Value all colleagues. Collaborate with one another.
Entrepreneurship	Seize opportunities. Innovate for and with customers.
Performance	Be accountable. Manage risks. Deliver our strength.

We have the following job opportunity available in our New York and London offices:

Senior Catastrophe Modeler

Description:

- Prepare data for importing into catastrophe models and perform modeling analyses of individual catastrophe excess, pro rata and per risk programs.
- Liaise with the underwriting department on review and interpretation of the modeling output, pricing of reinsurance of contracts and added analytics based on catastrophe model results.
- Interact with peers within brokers and client companies to ensure clear understanding of data requirements, quality and completeness of data provided, and interpretation of modeling results.
- Participate in research and development activities within the global cat modeling team in support of testing, training and deployment of updates and new models.
- Continuously enhance the catastrophe modeling function, and contribute towards the development of an integrated and efficient modeling workflow both from pricing as well as data reporting into the global risk aggregation processes.

Requirements:

- Bachelor or a Master's degree in engineering, math or applied science
- Minimum of 5 years' experience in catastrophe reinsurance modeling in a similar role
- Must have experience working in a multi-model environment, specifically RMS and AIR
- Insurance and reinsurance knowledge and understanding of policy and contract terms, with an ability to properly interpret and specify these in catastrophe models
- Solid knowledge of Excel/VBA Macros, Access and SQL with hands on experience querying client property insurance databases
- Strong work ethic and commitment to meet deadlines
- Ability to work in a fast paced team environment with rapidly changing priorities and demands
